

Core Knowledge

The Life Cycle of a Bean

Seeds and bulbs grow into mature plants.

Insects carry pollen from plant to plant to help make new plants.

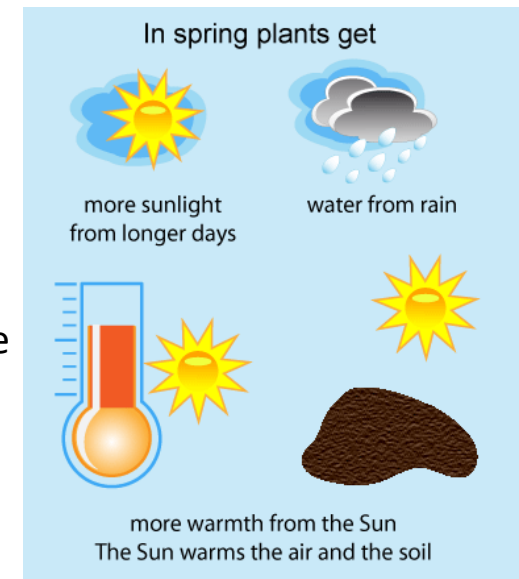

Key Vocabulary

Vocabulary	Definition
shoot	The first part to appear above the soil when the seed breaks open.
seedling	A young plant grown from seed.
mature	Fully grown
temperature	The measure of warmth or coldness of an object or material.

Core Knowledge

Plants need water, light and a suitable temperature to grow and stay healthy.

Seeds and bulbs need water to grow. They don't usually need light as their energy is stored inside.

Scientific Enquiry

? Asking questions and recognising they can be answered in different ways.

Making observations and taking measurements.
